

Device Clinic

Overview

NSC cardiology offers a pacemaker device clinic at both our Cumming and Johns Creek offices. We work directly with the leading companies in the world including Abbott, formerly known as St.Jude, Medtronic, Biotronik and Boston Scientific. We perform

complete device integrations of pacemakers and defibrillators in office. We also offer remote pacemaker checks to our patient's through each device company's remote monitoring program. This involves a simple phone call from anywhere in the United States.

RPM Program

Overview

We offer a remote blood pressure and vital signs monitoring program through MD-RPM which allows patients to take their blood pressure at home and have the readings sent to our office for review. The purpose is to map trends in order to improve management and reduce hospitalizations. This program follows Medicare's Chronic Care Management guidelines and is currently only offered to our patients with Medicare.
